Dear Sir/Madam

The reason for this email is the concern I have over the Draft Code of Professional Practice for Chiropractors. I do object to the demeaning tone of the document specially the way that it has been specifically written to tailor towards complaints received in certain jurisdictions then being used for every other chiropractor in the country.
I will strongly object to this code restricting the chiropractic profession in many ways that we have practiced for years and under simple NSW code for decades without any issues.
I also disagree with only being able to x-ray for redflags.
Most strongly I object to the code that does not recommend spinal checks for children. The argument for this objection would need many pages which I believe we have not been given enough time to prepare for.
I believe a new start is needed to be developed by National Board of Australia that is more suited and perhaps more professional and acceptable way of handling the challenges that could have long lasting consequences for the health of a country. Certainly better communication with its members will be highly recommended.

I have also read and support the submissions by Drs Peter Cowie, Mark Postles and Michael McKibbin. I believe there are many issues of concerns with this proposed code and I hope the contributions by the mentioned chiropractors will be given well deserved consideration in the final document.

Regards,

Hossein Hami
